

A FLASHING JOYSTICK

ABSTRACT OF THE DISCLOSURE

A flashing joystick comprises a power supply which supplying power to the joystick; a key-press group used for users controlling in order to send control signal to game machine to manipulate a game role; a signal transfer device which sending and receiving signal between the joystick and the game machine; a microprocessor which receives control signal from the key-press group and sends it to the game machine by the a signal transfer device so as to manipulate the game scenario progress; at least one LED (Light-Emitting Diode) are joined with the joystick circuit so that emitting flashing light when the circuit electrified; and a joystick shell which is made of penetrating-light material for penetrating flashing light produced by the LED out of the joystick shell. The present invention will emit florid flashing light while the playing course, and the player will get better playing results.
